

iTech Site Update

Tampa, FL

iTech is an innovative technology project of the Adolescent Medicine Trials Network (ATN) conducted across 12 sites in the US.

iTech aims to impact the HIV epidemic by developing and evaluating tech-based interventions across the HIV prevention and care continuum among youth.

	Study Description	Total # of Sites	Proportion of All Participants
	LYNX is a theory-driven mobile app to support young men who have sex with men seeking HIV/STI testing and PrEP.	2	 46% of 61
	COMPARE is looking for differences between two HIV prevention apps. Each app's components will be combined into a composite for public dissemination.	9	 12% of 381
	YouThrive is an adapted version of the "Thrive With Me" intervention to support youth living with HIV by providing peer support, resources, and self-monitoring.	8	 20% of 208
	P3 is a mobile app that uses game mechanics and social networking features to increase PrEP use among young men and trans women who have sex with men.	9	 17% of 246

iTech Research Study Participants in Tampa, FL

Background

Researchers at the University of South Florida recruited individuals in the Tampa Bay area for iTech's randomized controlled trials from 2018 to 2021.

Individuals were recruited using a variety of online and in-person strategies, including social media ads, outreach events, and collaborations with community partners.

The following charts describe basic characteristics of 158 participants in iTech studies at this research site.

Age (%)

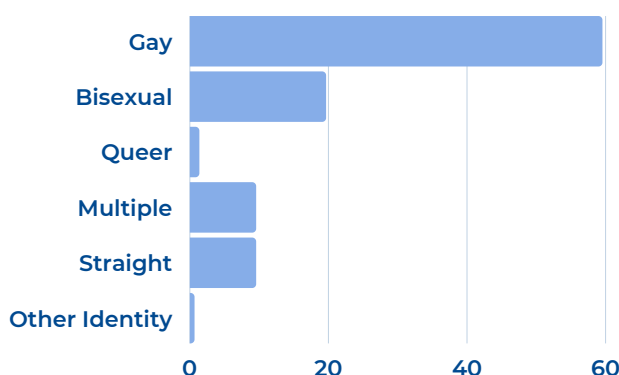

Gender Identity (%)**

Racial Identity (%)*

Sexual Identity (%)***

30% of participants identified as Latino/a/x

*AA (African-American), API (Asian & Pacific Islander), AI/AN (American Indian & Alaskan Native)

**AFAB (Assigned Female At-Birth), AMAB (Assigned Male At-Birth), Enby (phonetic pronunciation of "non-binary")

** "Other Identity" category includes pansexual, same gender loving, and decline to answer
